

HTML Elements

[< Previous](#)[Next >](#)

An HTML element is defined by a start tag, some content, and an end tag.

HTML Elements

The HTML **element** is everything from the start tag to the end tag:

`<tagname>Content goes here...</tagname>`

Examples of some HTML elements:

`<h1>My First Heading</h1>`

`<p>My first paragraph.</p>`

Start tag	Element content	End tag
<code><h1></code>	My First Heading	<code></h1></code>
<code><p></code>	My first paragraph.	<code></p></code>
<code>
</code>	<i>none</i>	<i>none</i>

Nested HTML Elements

HTML elements can be nested (this means that elements can contain other elements).

All HTML documents consist of nested HTML elements.

The following example contains four HTML elements (`<html>` , `<body>` , `<h1>` and `<p>`):

Example

```
<!DOCTYPE html>
<html>
<body>

<h1>My First Heading</h1>
<p>My first paragraph.</p>

</body>
</html>
```

[Try it Yourself »](#)

Example Explained

The `<html>` element is the root element and it defines the whole HTML document.

It has a start tag `<html>` and an end tag `</html>` .

Then, inside the `<html>` element there is a `<body>` element:

```
<body>
```

The `<body>` element defines the document's body.

It has a start tag `<body>` and an end tag `</body>` .

Then, inside the `<body>` element there are two other elements: `<h1>` and `<p>` :

```
<h1>My First Heading</h1>  
<p>My first paragraph.</p>
```

The `<h1>` element defines a heading.

It has a start tag `<h1>` and an end tag `</h1>` :

```
<h1>My First Heading</h1>
```

The `<p>` element defines a paragraph.

It has a start tag `<p>` and an end tag `</p>` :

```
<p>My first paragraph.</p>
```

ADVERTISEMENT

Never Skip the End Tag

Some HTML elements will display correctly, even if you forget the end tag:

Example

```
<html>
<body>

<p>This is a paragraph
<p>This is a paragraph

</body>
</html>
```

Try it Yourself »

However, never rely on this! Unexpected results and errors may occur if you forget the end tag!

Empty HTML Elements

HTML elements with no content are called empty elements.

HTML is Not Case Sensitive

HTML tags are not case sensitive: `<P>` means the same as `<p>`.

The HTML standard does not require lowercase tags, but W3C **recommends** lowercase in HTML, and **demand**s lowercase for stricter document types like XHTML.

At W3Schools we always use lowercase tag names.

HTML Exercises

Test Yourself With Exercises

Exercise:

Insert the correct end tag for the HTML heading.

```
<h1>This is a heading
```

HTML Tag Reference

W3Schools' tag reference contains additional information about these tags and their attributes.

Tag	Description
<u><html></u>	Defines the root of an HTML document
<u><body></u>	Defines the document's body
<u><h1> to <h6></u>	Defines HTML headings
