

ChatGPT

html

Copy code

```

<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Load Another Page</title>
</head>
<body>
  <div id="content"></div>
  <script>
    fetch('anotherPage.html')
      .then(response => response.text())
      .then(data => {
        document.getElementById('content').innerHTML = data;
      })
      .catch(error => console.error('Error loading the page:', error));
  </script>
</body>
</html>

```

#### 4. Using Server-Side Includes (SSI)

If you are working on a server that supports Server-Side Includes, you can include another HTML page within your current page.

html

Copy code

```

<!--#include virtual="anotherPage.html" -->

```

#### 5. Using Template Engines (Server-Side)

If you are using a server-side language or framework (e.g., PHP, Node.js with Express, Python with Flask/Django), you can use template engines to include other HTML files. Here's an example using PHP:

php

Copy code

```

<!-- index.php -->
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>My Page</title>
</head>
<body>
  <?php include 'anotherPage.html'; ?>
</body>
</html>

```

Choose the method that best fits your needs based on whether you are linking, embedding, dynamically loading, or including server-side content.
